Torque Bolt

Construction

The Torque Bolt is made from UV Stabilized Nylon and is used to provide the clamping force for the Vise-Top insulators. It is injection molded from black UV Stabilized Nylon. Torque bolts are supplied with each Vise-Top Insulator, but, they are also available separately for replacement purposes.

Features

- Special reduced cross section that is calibrated to provide the optimum clamping force for this cable with break-off eye
- UV resistant
- Lightweight and shatter resistant

Application

The Torque Bolt is used in Vise-Top Insulators and is designed to produce the optimum holding force to hold and support the cables.
