WITH SPEED

Circuit Defender™ Circuit Integrity (CI) Cables

Circuit Integrity (CI) Cables, typically soft-jacketed with solid conductors, are used in emergency alarm control equipment. These cables are installed inside conduit in high occupancy buildings and critical infrastructure to protect the emergency fire alarm system and their circuit controls. In the event of a fire, this specially designed cable protects the alarm system and keeps it operable; ensuring adequate evacuation time and the safety of first responders during fire conditions.

AVAILABLE THROUGH SOUTHWIRE SPEED™ SERVICES

Order your exact length cable today and get it tomorrow! No waste, quick turnaround, and easy ordering for your CI cable needs.
